This work: History-Independent Load Balancing

TWO-CHOICE LOAD BALANCING

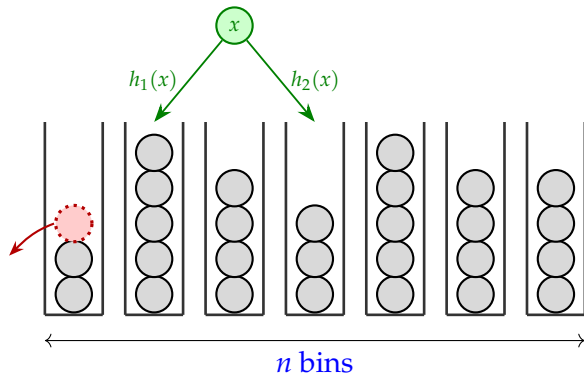

TWO-CHOICE LOAD BALANCING

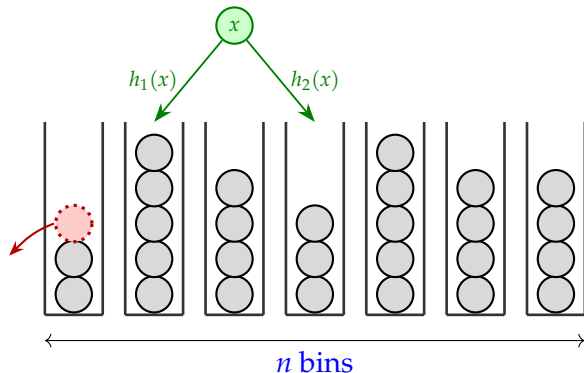

- Balls are **inserted**/**deleted**, with up to m present at a time.

TWO-CHOICE LOAD BALANCING

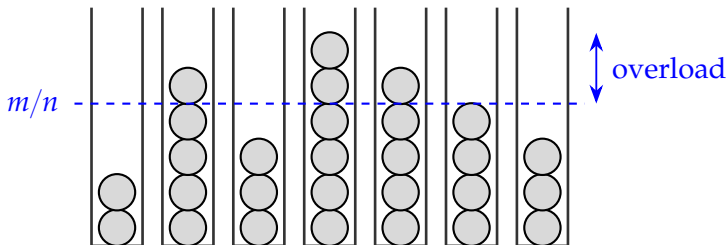

- ▶ Balls are **inserted**/**deleted**, with up to m present at a time.
- ▶ Each ball has two random bins where it can go.

TWO-CHOICE LOAD BALANCING

- ▶ Balls are **inserted**/**deleted**, with up to m present at a time.
- ▶ Each ball has two random bins where it can go.
- ▶ We must maintain a valid assignment of balls to bins.

TWO GOALS

Minimize Overload:

- ▶ i.e., the amount by which the fullest bin exceeds m/n .

TWO GOALS

Minimize Overload:

- ▶ i.e., the amount by which the fullest bin exceeds m/n .

Minimize Recourse:

- ▶ i.e., the number of balls moved around on any given insertion/deletion.

PUTTING IT ALL TOGETHER

PUTTING IT ALL TOGETHER

History-Independent Load Balancing:

PUTTING IT ALL TOGETHER

History-Independent Load Balancing:

- ▶ For all sets S of balls: If the current set is S , then the assignment is always A_S .

PUTTING IT ALL TOGETHER

History-Independent Load Balancing:

- ▶ For all sets S of balls: If the current set is S , then the assignment is always A_S .

Question: Does there exist a **history-independent** solution with small **recourse** and small **overload**?

PUTTING IT ALL TOGETHER

History-Independent Load Balancing:

- ▶ For all sets S of balls: If the current set is S , then the assignment is always A_S .

Question: Does there exist a **history-independent** solution with small **recourse** and small **overload**?

Our Main Result: There exists a **history-independent** solution with:

- ▶ High probability **overload** $O(1)$
- ▶ Expected **recourse** $O(\log \log(m/n))$

PAST WORK (NOT HISTORY INDEPENDENT)

Overload	Recourse	Reference	Caveats
$O(\log \log n)$	0	[ABKU '94] [BCSV '00]	insertion-only
$O(1)$	$O(\log(m/n))$	[Dietzfelbinger, Weidling '07]	insertion-only
$\tilde{O}(\sqrt{m/n})$	$O(1)$	[Frieze, Petti '18]	insertion-only
$O(\log(m/n))$	0	[Bansal, Kuszmaul '22]	no reinsertions
$O(1)$	$O(m/n)$	[Dietzfelbinger, Weidling '07]

$O(1)$	$O(m/n)$	[Dietzfelbinger, Weidling '07]	
$O(1)$	$O(\log \log(m/n))$	[This Paper]	

If we want overload $O(1)$, our result is a new state of the art!

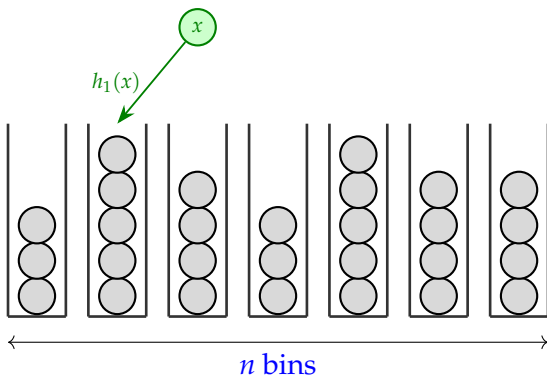

REST OF TALK: A SIMPLE WARMUP

Theorem: There exists a history-independent solution with:

- ▶ High-probability overload $\Theta(1)$ $O(\log \log n)$.
- ▶ Expected recourse $\Theta(\log \log(m/n))$ $O(m/n)$.

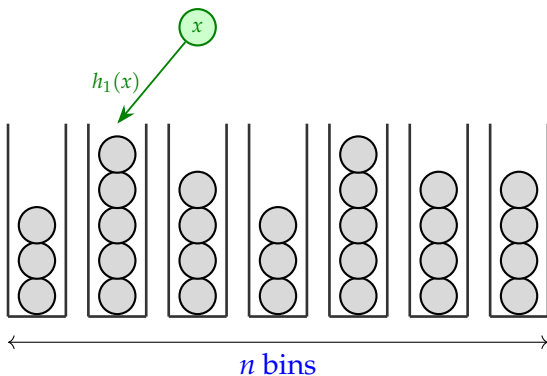

BASLINE 1: THE SINGLE-CHOICE STRATEGY

To insert a ball x , just put it in bin $h_1(x)$:

BASLINE 1: THE SINGLE-CHOICE STRATEGY

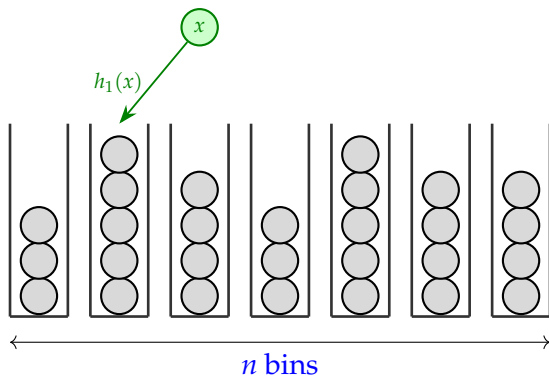

To insert a ball x , just put it in bin $h_1(x)$:

- This is history-independent ✓

BASLINE 1: THE SINGLE-CHOICE STRATEGY

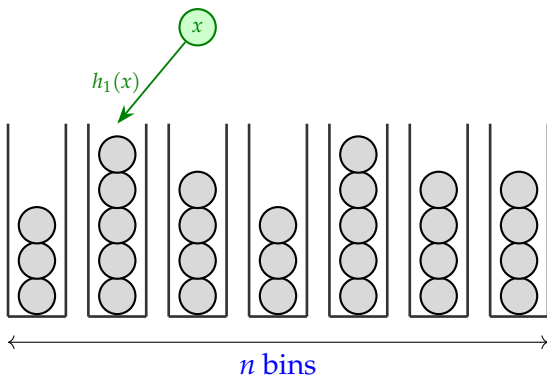

To insert a ball x , just put it in bin $h_1(x)$:

- ▶ This is history-independent ✓
- ▶ The recourse is 0 ✓

BASLINE 1: THE SINGLE-CHOICE STRATEGY

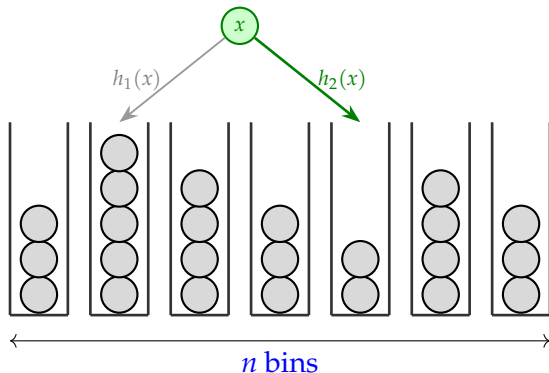

To insert a ball x , just put it in bin $h_1(x)$:

- ▶ This is history-independent ✓
- ▶ The recourse is 0 ✓
- ▶ But... the overload is huge, roughly $\sqrt{m/n}$ ✗

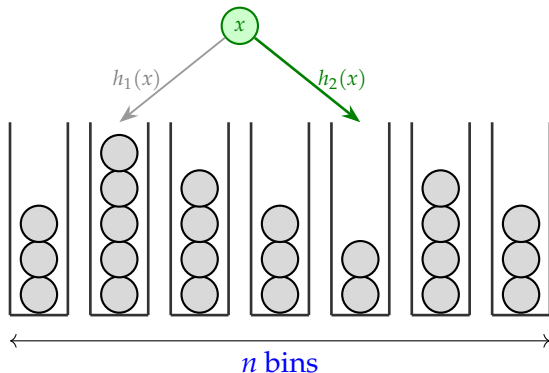

BASLINE 2: GREEDY INSERTIONS

To insert a ball x , put it in the **emptier** of its choices:

BASLINE 2: GREEDY INSERTIONS

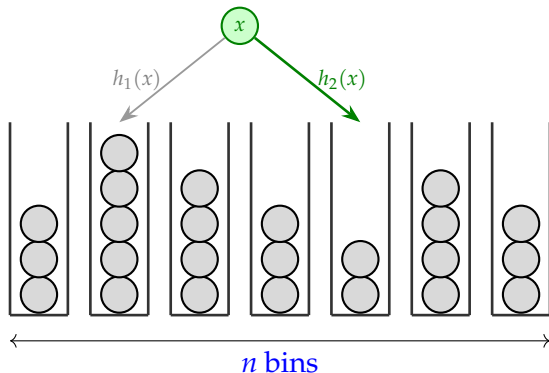

To insert a ball x , put it in the **emptier** of its choices:

- This is **not** history-independent ❌

BASELINE 2: GREEDY INSERTIONS

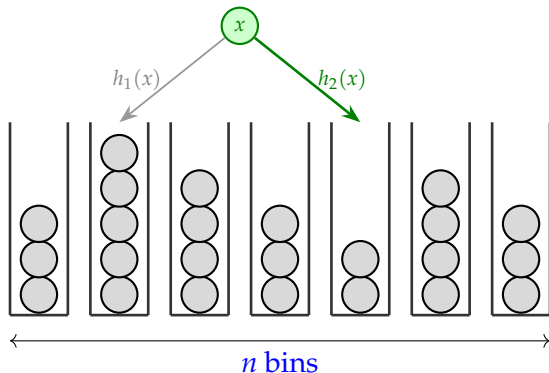

To insert a ball x , put it in the **emptier** of its choices:

- ▶ This is **not** history-independent ✗
- ▶ The recourse is 0 ✓

BASLINE 2: GREEDY INSERTIONS

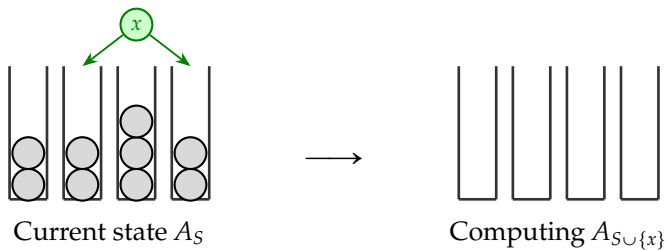

To insert a ball x , put it in the **emptier** of its choices:

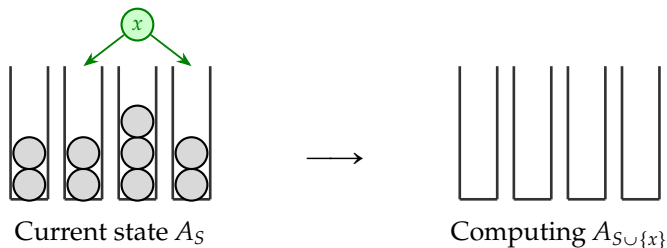

- ▶ This is **not** history-independent ✗
 - ▶ The recourse is 0 ✓
 - ▶ In the insertion-only case, the overload is $O(\log \log n)$ ✓
- [Berenbrink, Czumaj, Steger, and Vöcking '00]

WARMUP: HISTORY-INDEPENDENT GREEDY

WARMUP: HISTORY-INDEPENDENT GREEDY

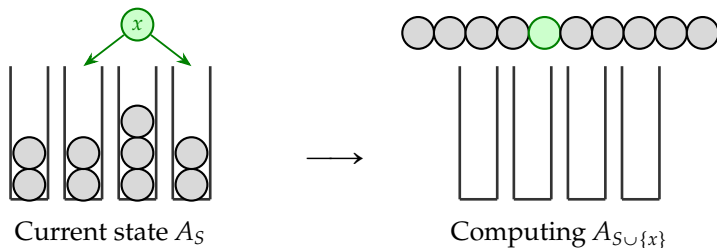

WARMUP: HISTORY-INDEPENDENT GREEDY

To compute $A_{S \cup \{x\}}$:

1. Empty out the bins.
2. Sort the balls in $S \cup \{x\}$ to get x_1, x_2, \dots
3. Insert the balls in sorted order using greedy.

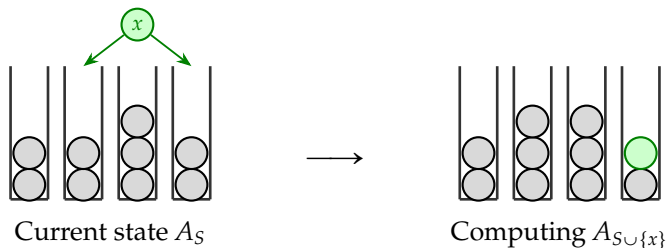

WARMUP: HISTORY-INDEPENDENT GREEDY

To compute $A_{S \cup \{x\}}$:

1. Empty out the bins.
2. Sort the balls in $S \cup \{x\}$ to get x_1, x_2, \dots
3. Insert the balls in sorted order using greedy.

ANALYZING THE RECOURSE

Recourse = 2

Computing A_S

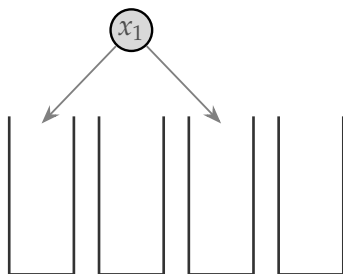

Computing $A_{S \cup \{x\}}$

Two key observations:

1. There's always one special bin with an extra ball
2. If a ball incurs recourse, one of its choices is the special bin

ANALYZING THE RECOURSE

Recourse = 2

Computing A_S

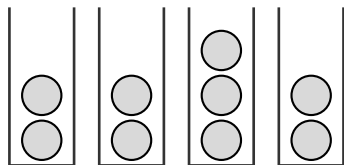

Computing $A_{S \cup \{x\}}$

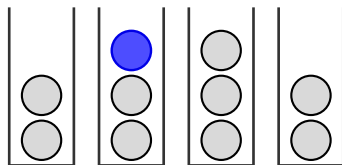

$$\Pr[\text{ball } x_i \text{ incurs recourse}] = O(1/n)$$

ANALYZING THE RECOURSE

Recourse = 2

Computing A_S

Computing $A_{S \cup \{x\}}$

$$\Pr[\text{ball } x_i \text{ incurs recourse}] = O(1/n)$$

$$\implies \mathbb{E}[\text{total recourse}] = \sum_i \Pr[\text{ball } x_i \text{ incurs recourse}] = O(m/n)$$

A SIMPLE WARMUP

Theorem: There exists a history-independent solution with:

- High-probability overload $\Theta(1)$ $O(\log \log n)$.
- Expected recourse $\Theta(\log \log(m/n))$ $O(m/n)$.

SLICE AND SPREAD

1. **Slice** off the jagged surface

SLICE AND SPREAD

1. **Slice** off the jagged surface

SLICE AND SPREAD

1. **Slice** off the jagged surface
2. **Spread** balls to their second-choice bins

SLICE AND SPREAD

1. **Slice** off the jagged surface
2. **Spread** balls to their second-choice bins

SLICE AND SPREAD

1. **Slice** off the jagged surface
2. **Spread** balls to their second-choice bins

SLICE AND SPREAD REDUCES OVERLOAD

Claim: Slice and spread reduces overload.

Proof (Sketch):

1. **Fact:** After throwing $m \gg n$ balls into n bins, every bin has load $m/n \pm \tilde{O}(\sqrt{m/n})$.
2. **Before:** Every bin has load $m/n \pm \tilde{O}(\sqrt{m/n})$.
3. **After:** Every bin has load $m/n \pm \tilde{O}(m/n)^{1/4}$.

WHAT'S THE RECOURSE?

Options:

(A) 0

(B) 1

(C) # balls being sliced off

(D) other?

REPEATING SLICE AND SPREAD

Good overload, good recourse...Could we keep slicing and spreading to get better and better overload?

Proposition: Test

ALGORITHMIC QUESTION

Question: Which balls will we slice in each round?

Option 1: Scrape off the top **Option 2:** Maintain a priority queue in each bin **What we do:** Assign every ball a round...

CHALLENGE 1: SLICING FAILURES

Challenge: There may not be enough fresh randomness in each bin. Not enough balls assigned to that round in that bin.

Result: We won't be able to slice off enough balls, and so the jaggedness will remain.

CHALLENGE 2: SPREADING FAILURES

Challenge: Spreading step got unlucky and didn't spread very evenly. There's more jaggedness than we want

Result: Either we have to slice more balls than we want and may not get the overload down, or we have to slice less balls than we want and may not get the jaggedness down.
